DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-12, drawn to a pharmaceutical composition comprising a compound having azatricyclic moiety (wherein m and n are 1) and a 1,2,5-thiodiazole moiety, classified in class 514, subclass 295, 362.
 - II. Claims 1-3, 6-12, drawn to a pharmaceutical composition comprising a heterocyclic compound other than those defined in group I, classified in class 514, subclass 183+.
 - III. Claims 13-17, drawn to a method of inducing analgesia by using the compound in group I, classified in class 514, subclass 295, 262.
 - IV. Claims 13-17, drawn to a method of inducing analgesia by using a heterocyclic compound in group II, classified in class 514, subclass 183+.

1. The inventions of Groups (I and III) and groups (II and IV) represent separate and distinct subject matters. They differ with respect to ingredients. Particularly, the inventions involved distinctly different compounds. Such compounds would have been reasonably expected to have different functions. Further, obtaining those compounds would have required different technologies. They therefore have different issues regarding patentability and enablement and represent patentable distinct subject matter.

Inventions groups I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using

Art Unit: 1617

the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process as claimed can be practiced with a materially different product such as narcotic analgesics.

Inventions II and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process as claimed can be practiced with a materially different product such as narcotic analgesics.

2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Species Election

4. Claims 1-4, and 6-17 are generic to a plurality of disclosed patentably distinct species comprising various compounds. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
